**High-strength aramid reinforcement sheet for structural strengthening**

**webertec force aramid sheet** is an aramid-fibre, uni-directional sheet for structural confinement and repair of structures. Available in two grades with Twaron® aramid fibres and compliant with Highways Agency advice note on bridge column strengthening. Recommended application with **webertec force EP primer** and **webertec force EP bonding adhesive** to form part of the **webertec force composite strengthening system**.

</table>

*Based upon 1000 mm width of sheet

**NB.** A further Grade 850 is available on request – 850 g/m²

### Features and benefits

- Lightweight and easy to apply
- High-strength, lightweight material
- Tolerant to damage and impact resistant
- Excellent chemical resistance
- Non-conductive material
- Factory produced with consistent mechanical properties
- Uni-directional fibres allowing utilisation of high-strength fibres
- Two grades of aramid sheet fabric to allow economy of application with number of layers

### Uses

- Confinement reinforcement
- Confinement and strengthening of bridge columns and piers
- Strengthening of silos, cooling towers, water tanks, and walls
- Impact strengthening of concrete and masonry structures
- Blast strengthening of masonry walls

### Typical applications

- Bridge columns
- Bridge piers
- Silos
- Towers
webertec force aramid sheet

Preparation
Before the application of the S&P aramid sheet, the quality of the substrate has to be checked. The surface tensile strength of the substrate has to be tested with a pull-off bond test. For load transference into the aramid sheet, the substrate needs to be sound and dust free. Minimum surface tensile strength is 1 N/mm².

The substrate must be roughened by light grit blasting or sand blasting or grinding to remove any surface contamination and surface cement laitance. The flatness of the substrate must be checked with a straight edge, maximum deviation shall be 5 mm over a 2 metre straight edge. Any blow-holes or depressions must be filled with webertec EP highbuild or webertec EP structural adhesive, prior to application of webertec force aramid sheet.

The edges of the structural member must be rounded by grinding to achieve a minimum radius of 15 mm.

Application
webertec force EP primer
The epoxy resin primer must be mixed in accordance with the product data sheet and applied to the prepared substrate. Allow to touch-dry – normally up to 2 hours.

webertec force EP bonding adhesive
The epoxy resin adhesive must be mixed in accordance with the data sheet and applied evenly to the primed substrate as a first coat.

Immediately after the adhesive is applied, the first layer of aramid sheet is applied by hand and pressed into the surface with a rubber roller and squeegee.

Another layer of adhesive is applied by brush or roller over the first layer and is pressed into the sheet with a squeegee. Additional layers are applied in the same way onto uncured, wet epoxy resin adhesive.

For multiple layers, use the wet lay-up process. Pre wet the aramid sheet with webertec force EP bonding adhesive and place the wetted-out sheet onto the first coat of adhesive.

Roller and squeegee into position, taking care to align the fibres correctly.

Encapsulate this layer with a second coat of webertec force EP bonding adhesive.

For multiple layers, repeat the above steps.

Pre-wetting of the aramid sheet can be achieved by either:
1. Manual lamination on a table protected with plastic sheeting.
2. Machine lamination using the webertec force laminator, details available on request.

Allow the epoxy resin adhesive to fully cure.

Cleaning
Clean tools carefully, using webertec solvent.

Packaging
S&P aramid sheets are supplied in 100 m long rolls at 300 mm width.

Coverage
Area coverage is 30 m² per roll.

Storage and shelf life
Store the aramid sheets in dry conditions and protect from exposure to direct sunlight.

Unlimited shelf life if stored correctly.

Health and safety
Sheet reinforcement material.
Loose fibres may be sharp, strong and irritating. Always wear gloves when handling fibre sheets and avoid contact with the skin. Cut the rolls by applying adhesive tape across the width of the roll and cut with industrial scissors through the tape to avoid fraying loose fibres.

For further information, please request the Material Safety Data Sheet for this product.

Technical services
Weber's Customer Services Department has a team of experienced advisors available to provide on-site advice both at the specification stage and during application. Detailed specifications can be provided for specific projects or more general works. Site visits and on-site demonstrations can be arranged on request.

Technical helpline
Tel: 08703 330 070  Fax: 0800 014 2995  e-mail: technical@netweber.co.uk

Sales enquiries
Weber products are distributed throughout the UK through selected stockists and distributors. Please contact the relevant Customer Services Team below for all product orders and enquiries.
