

weberwall brick

Fast fix, lightweight brick finish

- * For new build, MMC or refurbishment projects
- * For both internal and external use
- * Lightweight - 1 sheet of 20 bricks equal to the weight of 1 house brick

About this product

weberwall brick is a mineral brick finish, formulated from 95% minerals bound in cross-linked polymers to form a weather resistant fast fix brick system. The system is resistant to water and fully flexible while allowing existing structures, wall systems or new buildings to freely breathe beneath its surface.

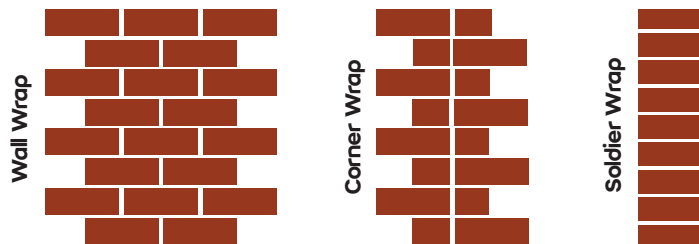

Features and benefits

- Fast fix – over 3 times faster than traditional brick slips
- Reduces specialist labour required on site
 - Reduces labour costs
 - Increases available labour
- Lightweight
- Suitable for use in buildings over 18m (11m in Scotland) having achieved an A2 Reaction to Fire Classification in accordance with BS EN 13501
- Safer, easier and cheaper to transport to site
- No lime or cement used in **weberwall brick** material – eliminates efflorescent lime bloom
- Range of colours and textures available
- Breathable – allowing the substrate to breathe
- 10 year product guarantee

Uses

For creating a realistic brick finish across a range of different applications and substrates.

There are 3 types of **weberwall brick** wrap

Applications

- New build construction
- Panelised on and off site construction systems
- Timber frame and steel frame construction
- Interior refurbishment and fit-out

Substrates

- Brick and blockwork
- All types of concrete surfaces
- EWI insulated systems
- Recommended render carrier boards
- Sound and suitably prepared internal plaster
